# What is the external validity of sentencing research?

A multi-level meta-analysis of race and gender disparities

Jose Pina-Sánchez & Ian Brunton-Smith

## Background

## Selection & Recording

## Preliminary Sample

## Findings

## Discussion

- Most of the sentencing evidence-base stems from the US
  - US Federal Courts
  - State Courts: Pennsylvania, Arizona, Minnesota, Florida

## Background

## Selection & Recording

## Preliminary Sample

## Findings

## Discussion

- Most of the sentencing evidence-base stems from the US
  - US Federal Courts
  - State Courts: Pennsylvania, Arizona, Minnesota, Florida
- This body of research has influenced sentencing policy and practice worldwide
  - particularly, debates of disparities and guidelines

## Background

### Selection & Recording

### Preliminary Sample

### Findings

### Discussion

- Most of the sentencing evidence-base stems from the US
  - US Federal Courts
  - State Courts: Pennsylvania, Arizona, Minnesota, Florida
- This body of research has influenced sentencing policy and practice worldwide
  - particularly, debates of disparities and guidelines
- How generalisable are those findings?
  - we should expect differences across jurisdictions
  - but also across offence types, ethnic groups, model choices, etc.

## Background

## Selection & Recording

## Preliminary Sample

## Findings

## Discussion

- We employ multi-level meta-analysis to estimate some of that variability
- We consider both gender and race disparities
  - there are three meta-analyses of race disparities, all of them focus exclusively on the US
  - no real meta-analysis on gender disparities yet

- Pre-registered protocol: <https://osf.io/2pnua>
- We created a pool of 1,024 potentially eligible studies
  - searched Scopus for academic articles, in English, published since 2000
  - “sentencing” AND (“data” OR “quantitative” OR “regress\*” OR “model\*” OR “multilevel” OR “multi-level”) AND (“decisions” OR “outcome\*” OR “length” OR “\*prison\*” OR “custod\*”).

Recording

Preliminary  
Sample

Findings

Discussion

- Pre-registered protocol: <https://osf.io/2pnua>
- We created a pool of 1,024 potentially eligible studies
  - searched Scopus for academic articles, in English, published since 2000
  - “sentencing” AND (“data” OR “quantitative” OR “regress\*” OR “model\*” OR “multilevel” OR “multi-level”) AND (“decisions” OR “outcome\*” OR “length” OR “\*prison\*” OR “custod\*”).
- Selection criteria
  - studies based on real sentences imposed on adult offenders
  - reporting the association of gender/race on sentence length conditioning on legal factors

Background

Selection &  
Recording

Preliminary  
Sample

Findings

Discussion

- Pre-registered protocol: <https://osf.io/2pnua>
- We created a pool of 1,024 potentially eligible studies
  - searched Scopus for academic articles, in English, published since 2000
  - “sentencing” AND (“data” OR “quantitative” OR “regress\*” OR “model\*” OR “multilevel” OR “multi-level”) AND (“decisions” OR “outcome\*” OR “length” OR “\*prison\*” OR “custod\*”).
- Selection criteria
  - studies based on real sentences imposed on adult offenders
  - reporting the association of gender/race on sentence length conditioning on legal factors
- Recording rules
  - estimates are transformed into multiplicative differences, i.e. the % change
  - estimates from different samples and ethnic groups are recorded separately
  - we also record: i) sample details, ii) model information, iii) the study’s title, and iv) the number of citations

Background

Selection &  
Recording

**Preliminary  
Sample**

Findings

Discussion

- We have selected 120 studies for gender, 110 for race
  - providing 151 estimates of gender disparities and 286 for race

Background

Selection &  
Recording

**Preliminary  
Sample**

Findings

Discussion

- We have selected 120 studies for gender, 110 for race
  - providing 151 estimates of gender disparities and 286 for race
- Most studies are based on jurisdictions from the US
  - 102 out of 120 for gender, 102 out of 110 for race
  - 48 of those from the US Federal courts

Background

Selection &  
Recording

Preliminary  
Sample

**Findings**

Discussion

- Pooled effects
  - 3% longer sentences for minority offenders
  - 13% shorter sentences for female offenders

Background

Selection &  
Recording

Preliminary  
Sample

**Findings**

Discussion

- Pooled effects
  - 3% longer sentences for minority offenders
  - 13% shorter sentences for female offenders
- No significant difference between the US and the rest
  - nor after excluding the US Federal courts

Background

Selection &  
Recording

Preliminary  
Sample

**Findings**

Discussion

- Pooled effects
  - 3% longer sentences for minority offenders
  - 13% shorter sentences for female offenders
- No significant difference between the US and the rest
  - nor after excluding the US Federal courts
- Low external validity
  - at the jurisdictional level for gender
  - at the study and estimate level for both

Background

Selection & Recording

Preliminary Sample

Findings

Discussion

Race disparities (minority/majority)

Gender disparities (female/male)

Background

Selection &  
Recording

Preliminary  
Sample

Findings

Discussion

- Evidence of selective reporting in the race disparities literature
  - when race is mentioned in the title, effect sizes are larger (1.02 vs 1.04)
  - entirely driven by studies reporting Native American disparities (0.91 vs 1.18)
  - there is no evidence of selective reporting for gender disparities

Background

Selection &  
Recording

Preliminary  
Sample

Findings

Discussion

- Evidence of selective reporting in the race disparities literature
  - when race is mentioned in the title, effect sizes are larger (1.02 vs 1.04)
  - entirely driven by studies reporting Native American disparities (0.91 vs 1.18)
  - there is no evidence of selective reporting for gender disparities
- No evidence of selective citation

Background

Selection &  
Recording

Preliminary  
Sample

Findings

Discussion

- Sentencing research implications
  - minority and male offenders are treated more harshly
  - the former appears to be universal, the latter is not
  - the American literature is not different from the \*rest of the world\*

Background

Selection &  
Recording

Preliminary  
Sample

Findings

Discussion

- Sentencing research implications
  - minority and male offenders are treated more harshly
  - the former appears to be universal, the latter is not
  - the American literature is not different from the \*rest of the world\*
- Meta-science implications
  - there is a lot of model uncertainty
  - we should not generalise from a single estimate
  - systematic misinterpretation of the literature (publication bias?) due to selective reporting and citation

Background

Selection &  
Recording

Preliminary  
Sample

Findings

**Discussion**

Background

Selection &  
Recording

Preliminary  
Sample

Findings

Discussion

- 1 Sentencing research needs to be cross-jurisdictional (even when focusing on a single country)

Background

Selection &  
Recording

Preliminary  
Sample

Findings

Discussion

- ① Sentencing research needs to be cross-jurisdictional (even when focusing on a single country)
- ② We need to publish via pre-registered reports

Background

Selection &  
Recording

Preliminary  
Sample

Findings

Discussion

- ① Sentencing research needs to be cross-jurisdictional (even when focusing on a single country)
- ② We need to publish via pre-registered reports
- ③ We should embrace model uncertainty
