Researching Crime and Justice

Workshop 7: Accessing Secondary Data

Jose Pina-Sánchez

Workshop Goals

Introduction

Pros and Cons of Secondary Data

Using Secondary Data in your Dissertation

Three Key Datasets

Data Analysis Software

Excel
SPSS

UK Police Data

The CCSS

The UK Data Service

Accessing the CSEW

Register with the UK Data Service

Accessing Safeguarded Data

Other Criminal Justice Statistics

Conclusion

- Discuss advantages and disadvantages of secondary data
- Encourage you to use secondary data in your dissertations
- Highlight the most important repositories and datasets on the subject of Criminology/Criminal Justice
- Practice how to access those datasets
- Practice how to make sense of them using Excel and SPSS

Register with the
UK Data Service

Accessing
Safeguarded Data

Other Criminal
Justice Statistics

Conclusion

- Advantages:
 - Quick to collect (relatively)
 - Usually cheap to use
 - Normally higher data quality
- Disadvantages:
 - The researcher may not be able to gather exactly the information they need
 - Although in the UK the sources of secondary data available to researchers are vast and often unexploited

Secondary Research and Originality

- You might have heard research cannot be original if data has been 're-used'
 - This is suggested in the Research Excellence Framework
 - What 'old school' academics tend to think
 - We (the teaching team) profoundly disagree with this

Conclusion

- You might have heard research cannot be original if data has been 're-used'
 - This is suggested in the Research Excellence Framework
 - What 'old school' academics tend to think
 - We (the teaching team) profoundly disagree with this
- There are lots of ways we can use secondary data in original ways
 - That is the point of the Big Data revolution
 - Recognised by new research funding schemes like the Alan Turing Institute, or the ESRC Secondary Data Analysis Initiative
 - Every year dozens of academic papers are published using just the CSEW
 - Is all research using government data (police data, the Census, stop and search statistics, etc.) not original?
 - Most of my research on sentencing uses data generated by the MoJ or the Sentencing Council

Secondary Data in your Dissertation

- We strongly recommend you use secondary data in your dissertation
 - Save you loads of time
 - Use high quality official data
 - As a default position I recommend that you review whether data is available to explore the topic of your interest first, only then, if there isn't anything useful, I would start considering generating my own data

Conclusion

- We strongly recommend you use secondary data in your dissertation
 - Save you loads of time
 - Use high quality official data
 - As a default position I recommend that you review whether data is available to explore the topic of your interest first, only then, if there isn't anything useful, I would start considering generating my own data
- There are still two(three?) main challenges associated to the use of secondary data, assuming it exists...
 - Finding the right data
 - Familiarising ourselves with the data (accessing the associated metadata)
 - 'Cleaning' that data
- We are going to practice some of that today

The CSEW

Introduction

Pros and Cons of Secondary Data

Using Secondary
Data in your
Dissertation

Other Criminal Justice Statistics

Conclusion

- Crime Survey for England and Wales (CSEW)
- Used to measure crime (in its different forms) in England and Wales
- Together with police records, the most important dataset on crime in the country
- A victimisation survey, i.e. asking the general public whether they have experienced crime
- Helps in estimating report rates (i.e. crime reported to the police)
- Provides lots of contextual information (type of crime, area, individual characteristics, etc.)
- We will access it using the UK Data Service

Introduction

UK Data Service

Accessing
Safeguarded Data

Other Criminal
Justice Statistics

Conclusion

- The Crown Court Sentencing Survey (CCSS)
- Arguably one of the best datasets on the subject of sentencing in the world
- Aims to collect all sentences processed by the Crown Court
- It captures the type of offence, sentence outcome, and many of the aggravating and mitigating factors present in the case
- Covering the 2011-2015 period

UK Police Data

Justice Statistics

Conclusion

- [DATA.POLICE.UK](https://data.police.uk)
- Police data made recently available to the public
- Covering all crimes recorded from 2014 on
- Great level of detail (type of offence, location, etc.)
- Linked to data from the Crown Prosecution Service (CPS) and HM Courts and Tribunals Service (HMCTS)

Excel (or any other spreadsheet software)

Other Criminal
Justice Statistics

Conclusion

- By far the most widespread format used to deal with quantitative data
 - Lots of opensource versions equally good, e.g. LibreOffice Calc
- Quite intuitive, similar to handling a table in word
 - Can manipulate variables (columns) and cases (rows) directly
 - Which doesn't require any training
 - But can introduce errors
- Can be used to undertake statistical analyses
 - But much more limited than specialised statistical software (e.g. SPSS, R, STATA, SAS, etc.)
 - And more clumsy too
- In sum, good for some 'quick and dirty' data manipulations, and to carry out some simple descriptive statistics or graphs

Conclusion

- Statistical Package for the Social Sciences
- Probably the most user-friendly statistical software out there
 - It can operate under a command-based format
 - But it is also built to be used under a ‘point-and-click’ format
- The most widely used statistical software
 - Certainly by Social Scientists
 - But also leading - although not for long - in all academic research

Conclusion

- Let's have a look at some of the police crime records
 - Let's focus on West Yorkshire in 2017
 - And let's use that data to find out about monthly changes in total crime
- From now on it might be a good idea for you to work in couples
- To download the data we need to get on DATA.POLICE.UK
 - Click on 'Data' at the top menu (see next slide)
 - Select 'January 2017' to 'December 2017'
 - Select West Yorkshire
 - And click on 'Generate file'
 - It is that simple

These CSV files provide street-level crime, outcome, and stop and search information, broken down by police force and [2011 lower layer super output area](#) (LSOA).

The Police Service of Northern Ireland does not currently provide stop and search data.

See the [changelog](#) for known data issues, and the [about page](#) for a description of each column in the CSV files.

Date range: to

- Forces:
- All forces
 - Avon and Somerset Constabulary
 - Bedfordshire Police
 - British Transport Police
 - Cambridgeshire Constabulary
 - Cheshire Constabulary
 - City of London Police
 - Cleveland Police
 - Cumbria Constabulary
 - Derbyshire Constabulary
 - Devon & Cornwall Police
 - Dorset Police
 - Durham Constabulary
 - Dyfed-Powys Police
 - Essex Police
 - Gloucestershire Constabulary
 - Greater Manchester Police

Conclusion

- Before start exploring the data we need to familiarise ourselves with its 'metadata'
 - To understand where does the data come from
 - and what exactly is captured in each variable
- In the same page used to download the data, click on the link 'about page'
- Question: Can you find out the origin of the UK Police Data, and the information captured in each variable?

Conclusion

CSV Columns

The columns in the CSV files are as follows:

Field	Meaning
Reported by	The force that provided the data about the crime.
Falls within	At present, also the force that provided the data about the crime. This is currently being looked into and is likely to change in the near future.
Longitude and Latitude	The anonymised coordinates of the crime. See Location Anonymisation for more information.
LSOA code and LSOA name	References to the Lower Layer Super Output Area that the anonymised point falls into, according to the LSOA boundaries provided by the Office for National Statistics.
Crime type	One of the crime types listed in the Police.UK FAQ .
Last outcome category	A reference to whichever of the outcomes associated with the crime occurred most recently. For example, this crime's 'Last outcome category' would be 'Formal action is not in the public interest'.
Context	A field provided for forces to provide additional human-readable data about individual crimes. Currently, for newly added CSVs, this is always empty.

Data Provenance

The data on this site is published by the Home Office, and is provided to us by the 43 geographic police forces in England and Wales, the British Transport Police, the Police Service of Northern Ireland and the Ministry of Justice.

Data Flow

Every month each police force generates a [Crime and ASB file](#) and a [Police Outcomes file](#) in a set format. The forces upload these to a private server managed by the Home Office in the Government network, where the files undergo [quality assurance](#).

Copies of the data from police forces is then sent to the Ministry of Justice (MoJ), where they try to [match the crimes with any court results](#) contained in their own records. The MoJ send any matching court results back to the Home Office, where they are integrated with the existing data.

Conclusion

- This dataset is relatively simple
 - Only 12 variables
 - All of them pretty straightforward
- Let's now have a look at the data itself
 - Double click on the January file that you have downloaded
 - That will open the (.csv) file from Excel

Conclusion

- We can use this data to replicate Farrell and Pease (1994)
 - Who showed high seasonality in domestic violence incidents using police data from Merseyside
- To do so we need the total number of cases recorded by West Yorkshire police each month
 - Go to the bottom of the spreadsheet and see how many cases are recorded
 - Open a new spreadsheet and write down that figure together with the name of the month
 - Repeat for each of the twelve files downloaded

Number of Cases Recorded per Month

Conclusion

- Can we corroborate Farrell and Pease (1994)?
 - Is there evidence of a seasonal effect?
 - Why might that be?
- This is just one question that we have used as an example
- There are lots of interesting questions that could be explored using this data
 - It is a real gold mine, yet few Criminologists are using it
 - Can be used to explore spatial crime patterns (e.g. displacement effects)
 - Changes in attrition rates associated to budget cuts
 - Changes in the prevalence of different types of crime
 - And a long etc.

The Crown Court Sentencing Survey

Conclusion

- Let's have a look at sentencing in the Crown Court
 - We can access fraud offences imposed in 2014, for example
 - And use that data to estimate gender disparities in sentencing
- To download the data go to sentencingcouncil.org.uk
 - Click on 'Analysis and research' at the top menu
 - Click on 'Crown Court Sentencing Survey' on the left margin
 - Then 'CCSS underlying data'
 - Scroll down and you will find links to the 'User Guide', 'Metadata', and the actual 'Datasets'
 - Just like the UK Police Data this is really easy to access
 - Click on the three links to open/download them

CCSS underlying data

Crown Court Sentencing Survey underlying data

The data underlying the Crown Court Sentencing Survey publication are available for download below, in the format of CSV files. These files contain anonymised data for each individual 'record' or offender recorded in the survey. These data are most commonly referred to as 'record level data' and can be used for analysis.

An accompanying metadata document and guide containing important information on the use and interpretation of the data are also available. It is strongly recommended that these documents are read before the datasets are used for analysis.

REVISION: An error was identified in the sexual offences dataset for 2014, which affected the data on culpability factors. This has now been rectified and a revised dataset has been published.

Coverage: England and Wales

Period:

[1 January 2011 to 31 December 2011](#)[1 January 2012 to 31 March 2012](#)[1 April 2012 to 31 December 2012](#)

Conclusion

- To compare probabilities of receiving a custodial sentence we can use a pivot table
- First we need a new variable capturing whether the defendant received a custodial sentence
 - Scroll right and find the first empty column (CB)
 - Call it ‘Custody’
 - Click on the second row in that same column
 - Click on ‘Formulas’ at the top menu, select ‘Logical’, then ‘IF’
 - In the Logical_test box enter the following command:
F2= “Immediate custody”
 - In the ‘Value_if_true’ box type 1, in ‘Value_if_false’ box type 0
 - Click ‘OK’ and drag the formula through the sample size (until row 531)
 - To do that click on the bottom-right corner of cell where the formula was introduced and drag it down
 - Check that the new variable is correctly coding cases sentenced to custody as 1s (you can do so by comparing it with ‘OUTCOME’ in column F)

Conclusion

- We can now create a pivot table to compare the probabilities of receiving a custodial sentence for male and female offenders
 - Click on ‘INSERT’ at the top menu, then on ‘PivotTable’ at the top-left corner
 - A new menu will pop-up, press ‘OK’ and you will be redirected to a new sheet
 - Tick ‘GENDER’ and move it to the ‘ROWS’ box
 - Tick ‘Custody’ and move it to the ‘VALUES’ box
 - That will give you the number of cases sentenced to custody by gender
 - Right click ‘Sum of counts’ and go to ‘Value Field Settings’
 - Select ‘Average’
 - That gives you the proportion of male and female offenders receiving a custodial sentence
- Question: Which is higher? Do we corroborate or refute Pina-Sánchez and Harris (In Press)?

Conclusion

- A truly fantastic repository of data
 - Available to UK researchers and students
 - Stores national surveys (including the CSEW), official statistics like the Census, but also datasets created by individual researchers
 - Each dataset includes a description of the mode of data collection, sampling design, and meets certain quality criteria
- Only a small fraction of the data is fully open
 - Different levels of access to data depending to how sensitive it is
 - To see what is completely open get into the [UK Data Service](#)
 - Click on ‘Get data’ at the top and on ‘Open data’ on the left-margin
 - You will find a summary of the types of open data available with links to them

Open data

It is our explicit long-term goal to work with data owners to identify and remove all unnecessary barriers to access.

An increasing number of our datasets are available without registration or authentication using open data licences described in our [Data Access Policy](#). These data are for use with an open licence and are not classified as personal. We are also working to gain open data certification via the Open Data Institute.

We also provide links to other [open data resources](#) that may be of interest.

Conclusion

- Alternatively you can look for data (open or not) using a keyword search
- Let's access a teaching (open) version of the CSEW
- Click on 'Get data' at the top menu
 - Then enter 'Crime Survey for England and Wales' in the keyword search box
 - You will find that there are lots of versions of the CSEW, depending on their degree of access and their date of publication
 - Click on the empty box beneath 'Access' on the left margin
 - Select 'Open'
 - Then click on 'Crime Survey for England and Wales, 2013-2014: Unrestricted Access Teaching Dataset'

Conclusion

- To see what is in this version of the CSEW download the User Guide
 - Click on the ‘Documentation’ tab
 - Download the ‘Teaching Dataset User Guide, 2016’
- Here you will find:
 - A short description of the CSEW
 - The data collection process (sampling strategy, questionnaire design, mode of data collection, etc.)
 - Information on the content of each variable, including...
 - The variable name: a one word summary of the content of a variable (e.g. *yrsarea*)
 - The variable label: a longer description of that variable (e.g. *How long lived in this area?*)
 - The variable coding system: the numeric value given to each possible response (e.g. 1 for *Less than a month*, 2 for *12 months but less than 2 years*, etc.)
- As before, it is really important that you familiarise yourselves with this information

Conclusion

- How does the sample look like?
 - What is the mode of data collection
 - What is the sample size?
- Any information on respondents' ethnicity?
 - What is the name of the variable containing that information?
 - How is it coded?
 - How is it broken down by ethnicity?
 - Is it representative of the UK population?
 - Are there any missing cases?
 - Why do you think that is?
- Any information on fear of crime?
 - What would you use to provide a succinct estimate about the level of fear of crime in England and Wales in 2013/14?

Conclusion

- After we get an idea of what kind of information is in the dataset we can start exploring it
- Download the SPSS version of the 2013/14 teaching version of the CSEW
 - Click on ‘Access data’ then on the SPSS ‘Download’ link
 - You will get a zipped folder, open it, open the ‘SPSS’ subfolder
 - Double click on the file ‘csew1314teachingopen.sav’ to open the dataset from SPSS
- Now we can start ‘playing’ with this data

Conclusion

- We can find out about people's perception on the prevalence of vandalism and graffiti in the areas they live
 - This could be answered by looking at a frequency table
 - First identify the variable capturing perceived prevalence of vandalism and graffiti
 - Then go to 'Analyze' at the top menu
 - Select 'Descriptive Statistics' and 'Frequencies'
 - Double-click on the variable that we want to explore and press 'OK'
 - Question: How common is vandalism or graffiti in England and Wales?

Conclusion

- We can also examine which areas seem to be more commonly affected by vandalism
 - For example we can compare the prevalence of vandalism in rural and urban areas
 - This could be answered using a cross-tab
 - As before, go to ‘Analyze’ and ‘Descriptive Statistics’
 - but now click on ‘Crosstabs’
 - Place vandalism on the ‘Column’ box and type of area on the ‘Row’ box
 - Click on ‘Cells’, at the right-hand side of the Crosstabs menu
 - And tick ‘Row’
 - You can now click on ‘Continue’ and ‘OK’
 - Question: Which area seems to be more affected by vandalism?
- We will carry on exploring the CSEW and using SPSS next term

Conclusion

The screenshot shows the IBM SPSS Statistics Data Editor interface. A dialog box titled "Crosstabs: Cell Display" is open, allowing users to configure the display of cell counts and statistics for a crosstabs analysis. The dialog box is divided into several sections:

- Counts:** Includes checkboxes for "Observed" (checked), "Expected", and "Hide small counts" (with a threshold of 5).
- z-test:** Includes checkboxes for "Compare column proportions" (checked) and "Adjust p-values (Bonferroni method)".
- Percentages:** Includes radio buttons for "Row" (selected), "Column", and "Total".
- Residuals:** Includes checkboxes for "Unstandardized", "Standardized" (checked), and "Adjusted standardized".
- Noninteger Weights:** Includes radio buttons for "Round cell counts" (selected), "Truncate cell counts", "Round case weights", "Truncate case weights", and "No adjustments".

At the bottom of the dialog box are "Continue", "Cancel", and "Help" buttons. The background shows a data table with columns for Name, Type, Width, Decimals, Label, Values, Missing, Columns, Align, Measure, and Role. The data table contains 38 rows of variables, including "edeprivex", "wdeprivex", "IndivWgtx", "cause2m", "walkdark", "walkday", "homealson", "wburgl", "wmugged", "wcarstol", "wfromcar", "wrapeat", "wattack", "wraceatt", "worynx", "bcsvictim", "rubcomm", "vandcomm", "poorhou", and "antisocx".

Conclusion

- Being a student of an UK University you can register with the UK Data Service
- And access most of the datasets stored in the archive
- Let's do so now
 - Go to ukdataservice.ac.uk
 - Click on 'Register/Login' at the top-right corner
 - It will ask you to sign in your Leeds account - if you are not already signed in
 - Enter the requested details
 - You should end up in page indicating 'My account'

My account

Welcome to your account with the UK Data Service. Here you can keep track of your data downloads and access requests, projects and data deposits.

If you have already added one or more datasets to your account, you will need to assign them to a project before you can view them. If you have been redirected here after registering with the UK Data Service or after logging in to your account, you can use the data catalogue link at the top of this page to search datasets within our collection.

If you have been redirected from a partner website, this is because your action relates to data within our collection, so please return to your original website.

Each page features a page guide in the top-right corner, providing further information and instructions.

Conclusion

- Now you are registered with the UK Data Service
 - You can access much of the data stored in there
 - In principle any dataset labelled as ‘Open’ or ‘Safeguarded’
- Let’s see if we can find a dataset that could be useful to your dissertation
 - Run a keyword search for a topic of your interest (I am using ‘fraud’ in the example in the next slide)
 - Notice the different forms of ‘Data Type’ available on the left margin (Survey data, big data, longitudinal data, qualitative data)
 - Restrict the search to ‘Safeguarded’ in the ‘Access’ criteria
 - Spend some time looking around for a dataset of your interest
 - Put it aside for now (e.g. right-click on it to open it in another tab of your browser)
 - We are going to try to access it, but before we need to create a ‘Project’

Conclusion

- Let's see how to create a 'Project' to access the full version of the 2017-2018 CSEW
 - The latest version available
 - Providing the full sample (24,715 cases) and the full list of variables (2,996)
- You can follow the same steps to access another dataset of your interest
 - Click on 'My Account' at the top menu, and on 'Data' and 'Projects' on the left menu
 - Click on 'Create a new project'
 - Type in a title (e.g. 'Dissertation')
 - Choose 'Non-commercial' as the 'Project-type'
 - Write down an abstract of your research project (100 characters minimum)
 - Then click on 'Create project'

Conclusion

- Once the project is created you need to go back to the dataset you want to access (in our case the 2017-2018 CSEW)
 - Go to the main page of the UK Data Service, type ‘Crime Survey for England and Wales’ in the search box
 - Click on ‘Crime Survey for England and Wales 2017-2018’
 - Click on ‘Access data’ and ‘Add to account’
 - Tick the dataset and click on ‘Add to Project’
 - Tick ‘Add to an existing project’, choose ‘Dissertation’, then click ‘Add to project’
 - You should be able to download the data now, choose the SPSS format if available
 - Once downloaded open it from SPSS to start exploring it

Conclusion

- Invest time looking for secondary data
 - It is possible that the data you are looking for does not exist
 - but it is generally a very good idea to start any research by reviewing what kind of data on the topic is available
 - It is an effort that tends to pay off more often than not
- Next term we will get started analysing the CSEW using SPSS
